All,
 I've **updated** week 3 and week 4 web pages and posted syllabus, slides and links.

Reading Assignment: I'm asking you to read the attached *20-point Climate-Change Summary* (- which can be found here too: <http://www.denverclimatestudygroup.com/NAS-NRC/NASclimate-change2014SUMMARY.pdf>)

More on Ice Core Lab:

For those of you **missed the Ice Core lab trip**, Richard said to email me or get information about when you could come and give me contact info - Richard could accommodate you to tag-along on other field trips - I can be intermediary.

Stan can you help remind me of this Tuesday?/thanks

And I posted/updated this on week 3:

NICL - **Video gallery link that you saw on the slide show by Richard Nunn:** How to drill a two-mile ice core - and more: <http://www.waisdivide.unh.edu/multimedia/video.shtml>

Richard Nunn (NICL) sent me this link about ocean warming:

Quantifying underestimates of long-term upper-ocean

warming <http://www.nature.com/nclimate/journal/vaop/ncurrent/full/nclimate2389.html>

Deep abyssal ocean:

Additionally, Fred sent this link without comment: <http://www.jpl.nasa.gov/news/news.php?feature=4321> ...it's about the deep abyss of the ocean not warming; this does not bother me - it's part of why I say it takes 600-1000 years (or more - and may take more in this case - it's hard to "force" warmer less dense water for the oceans to equilibrate with what's going on at the surface.

So see SkSc reply <http://www.skepticalscience.com/role-of-deep-ocean-in-global-warming-contrarians-wrong.html> - and instead of a past 5% maybe it's zero - so?

Roger Pielke and Judith Curry:

I've mentioned Judith Curry and Roger Pielke before in class - and their arguments about various events not being statistically relevant - YET. So I send you a couple links to read more - this one somewhat deep into climate science however: <http://www.realclimate.org/index.php/archives/2014/08/ipcc-attribution-statements-redux-a-response-to-judith-curry/>

See you Tuesday - check week 5 for updated page tomorrow sometime

Paul
