

FIRST LOOK

Signing Off for 2015: This will be the last edition of Hot News until January 4th, 2016, when we will send you a recap of everything that happened in the climate world over the holidays. Keep following us on Twitter @ClimateNexus for breaking and daily news updates, and sign-up for our Clean Energy News Report for one last blast of news this afternoon. Happy holidays, safe travels, and we will see you in 2016 for another year of Hot News!

TOP STORIES

US Cities Join Defense of Clean Power Plan: More than a dozen US cities, along with the National League of Cities and the US Conference of Mayors, filed a motion Tuesday to defend the EPA's Clean Power Plan. The cities, including Salt Lake City, Baltimore, and Houston, join 18 states that have also filed as "friends of the court," as well as two former Republican EPA administrators. The motions represent the local and regional commitment to reducing emissions and reinforcing the US pledge to fight climate change. In statements, mayors said they are best equipped to defend CPP because they are "on the front line" of climate change. (Reuters, The Hill, Politico Pro \$, Southwest Journal, Baltimore Sun, Deseret News, AP)

Most US Republicans Support Paris Agreement, Poll Shows: The majority of US Republicans support global action on climate change after the Paris Agreement, a new poll from Reuters shows. Nearly 60 percent support US efforts to work with other nations to limit global warming, and almost 70 percent say they are willing to take individual action to fight climate change within the US. This support has still not been reflected on the campaign trail for GOP candidates, who have largely ignored the Paris Agreement. Ted Cruz, however, recently said that he would withdraw the US from the agreement if elected. Republicans remain less enthusiastic about climate action than Democrats, 91 percent of whom support the global climate deal. (Reuters, New Republic, Washington Post \$, The Hill)

#EveryoneKnew, Not Just Exxon: The American Petroleum Institute and some of the biggest US oil companies ran a climate research task force in the late 1970s and early 1980s, according to internal documents obtained by InsideClimate News. This indicates that much of the oil industry, not just Exxon, was aware of the negative impacts of fossil fuels on the global climate decades ago. The task force, made up of companies like Shell and Texaco, followed a similar strategy to Exxon's in that they understood the dangers of climate change and sowed doubt about the threat to protect their business models.
