

TYPES OF VEHICLE DRIVE SYSTEMS

Example: Any standard gas powered vehicle

Example: Toyota Prius

Contemporary Plug-in Hybrids Use Combinations Of Series And Parallel Operation Based On Conditions
Examples: Chevy Volt & Toyota Prius Prime

Example: Chevy Bolt
Nissan Leaf and all Tesla vehicles

Types of EV Charging Stations

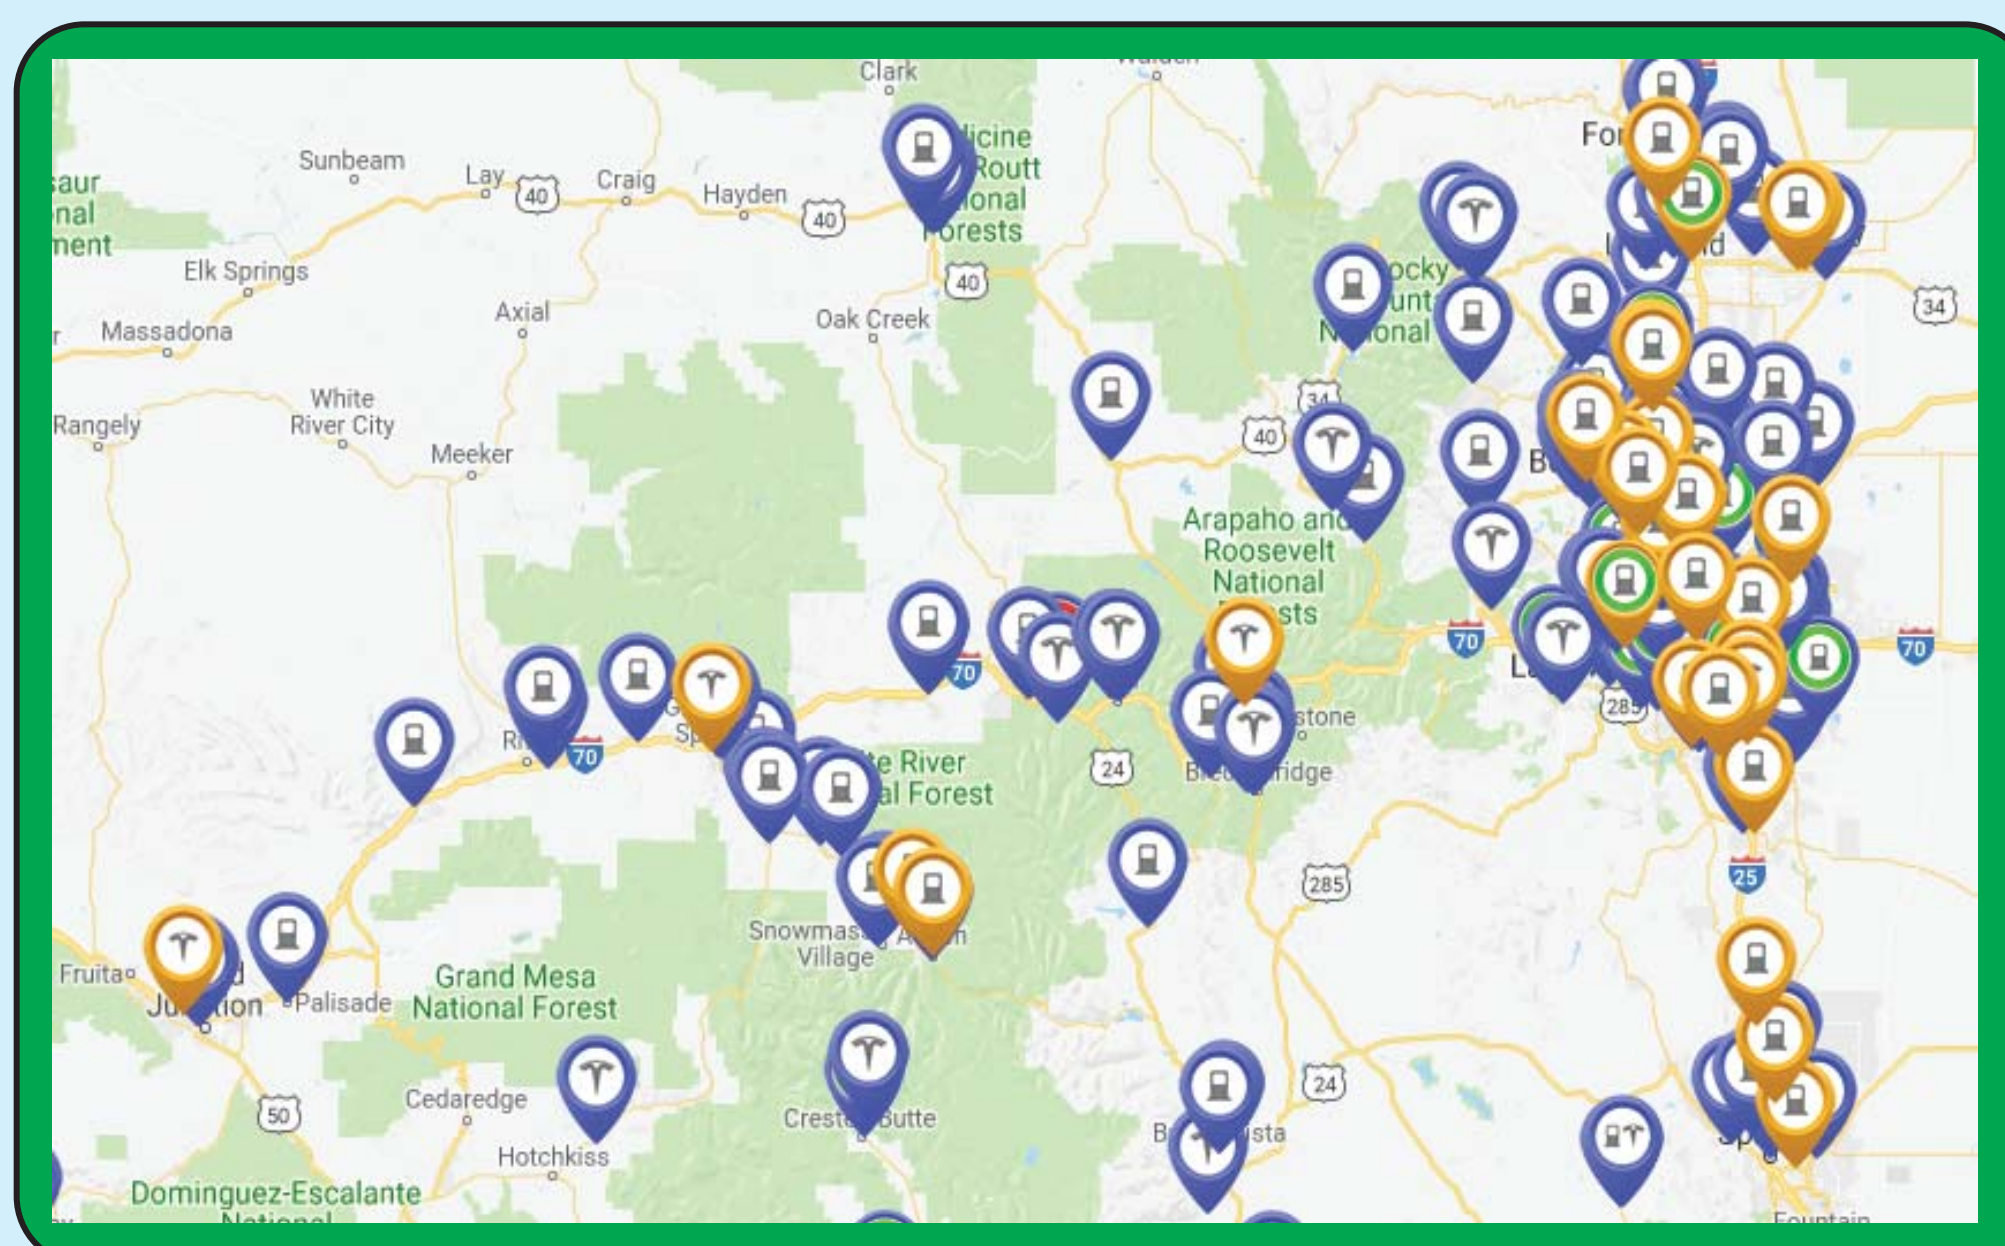

AC Level One	AC Level Two	DC Fast Charging And "Supercharger"
SUPPLY VOLTAGE 120v 1-Phase AC	SUPPLY VOLTAGE 208V or 240V 1-Phase AC	SUPPLY VOLTAGE 208V or 480V 3-Phase AC
AMPS 12-16 Amps	AMPS 12-80 Amps (Typ. 32 Amps)	AMPS <125 Amps (Typ. 60 Amps)
CHARGING LOADS 1.4 to 1.9 kW	CHARGING LOADS 2.5 to 19.2 kW (Typ. 7 kW)	CHARGING LOADS <90 kW (Typ. 50 kW)
CHARGE TIME FOR VEHICLE 3-5 Miles of Range Per Hour	CHARGE TIME FOR VEHICLE 10-20 Miles of Range Per Hour	CHARGE TIME FOR VEHICLE 80% Charge in 20-30 Minutes

Level 1 is the least expensive charging method requiring a standard grounded 120V outlet. Most EV's come equipped with a Level 1 charging cable. Plug-in hybrids can successfully use level 1 charging as a nightly charging method.

Level 2 charging requires the use of a level 2 charging unit and 240V outlet, the type commonly used for electric clothes dryers. Installations range from \$500 to over \$1,000 including the charger. A battery EV (BEV) used as a daily commuter is best served with a level two charger.

DC fast charging is typically found at designated recharging stations along major highway routes throughout the nation. Currently Tesla has the largest national long range recharging network. BEVs must rely in these networks for long range travel. Plug-in hybrids can serve as a transition vehicle as these networks are being built out.

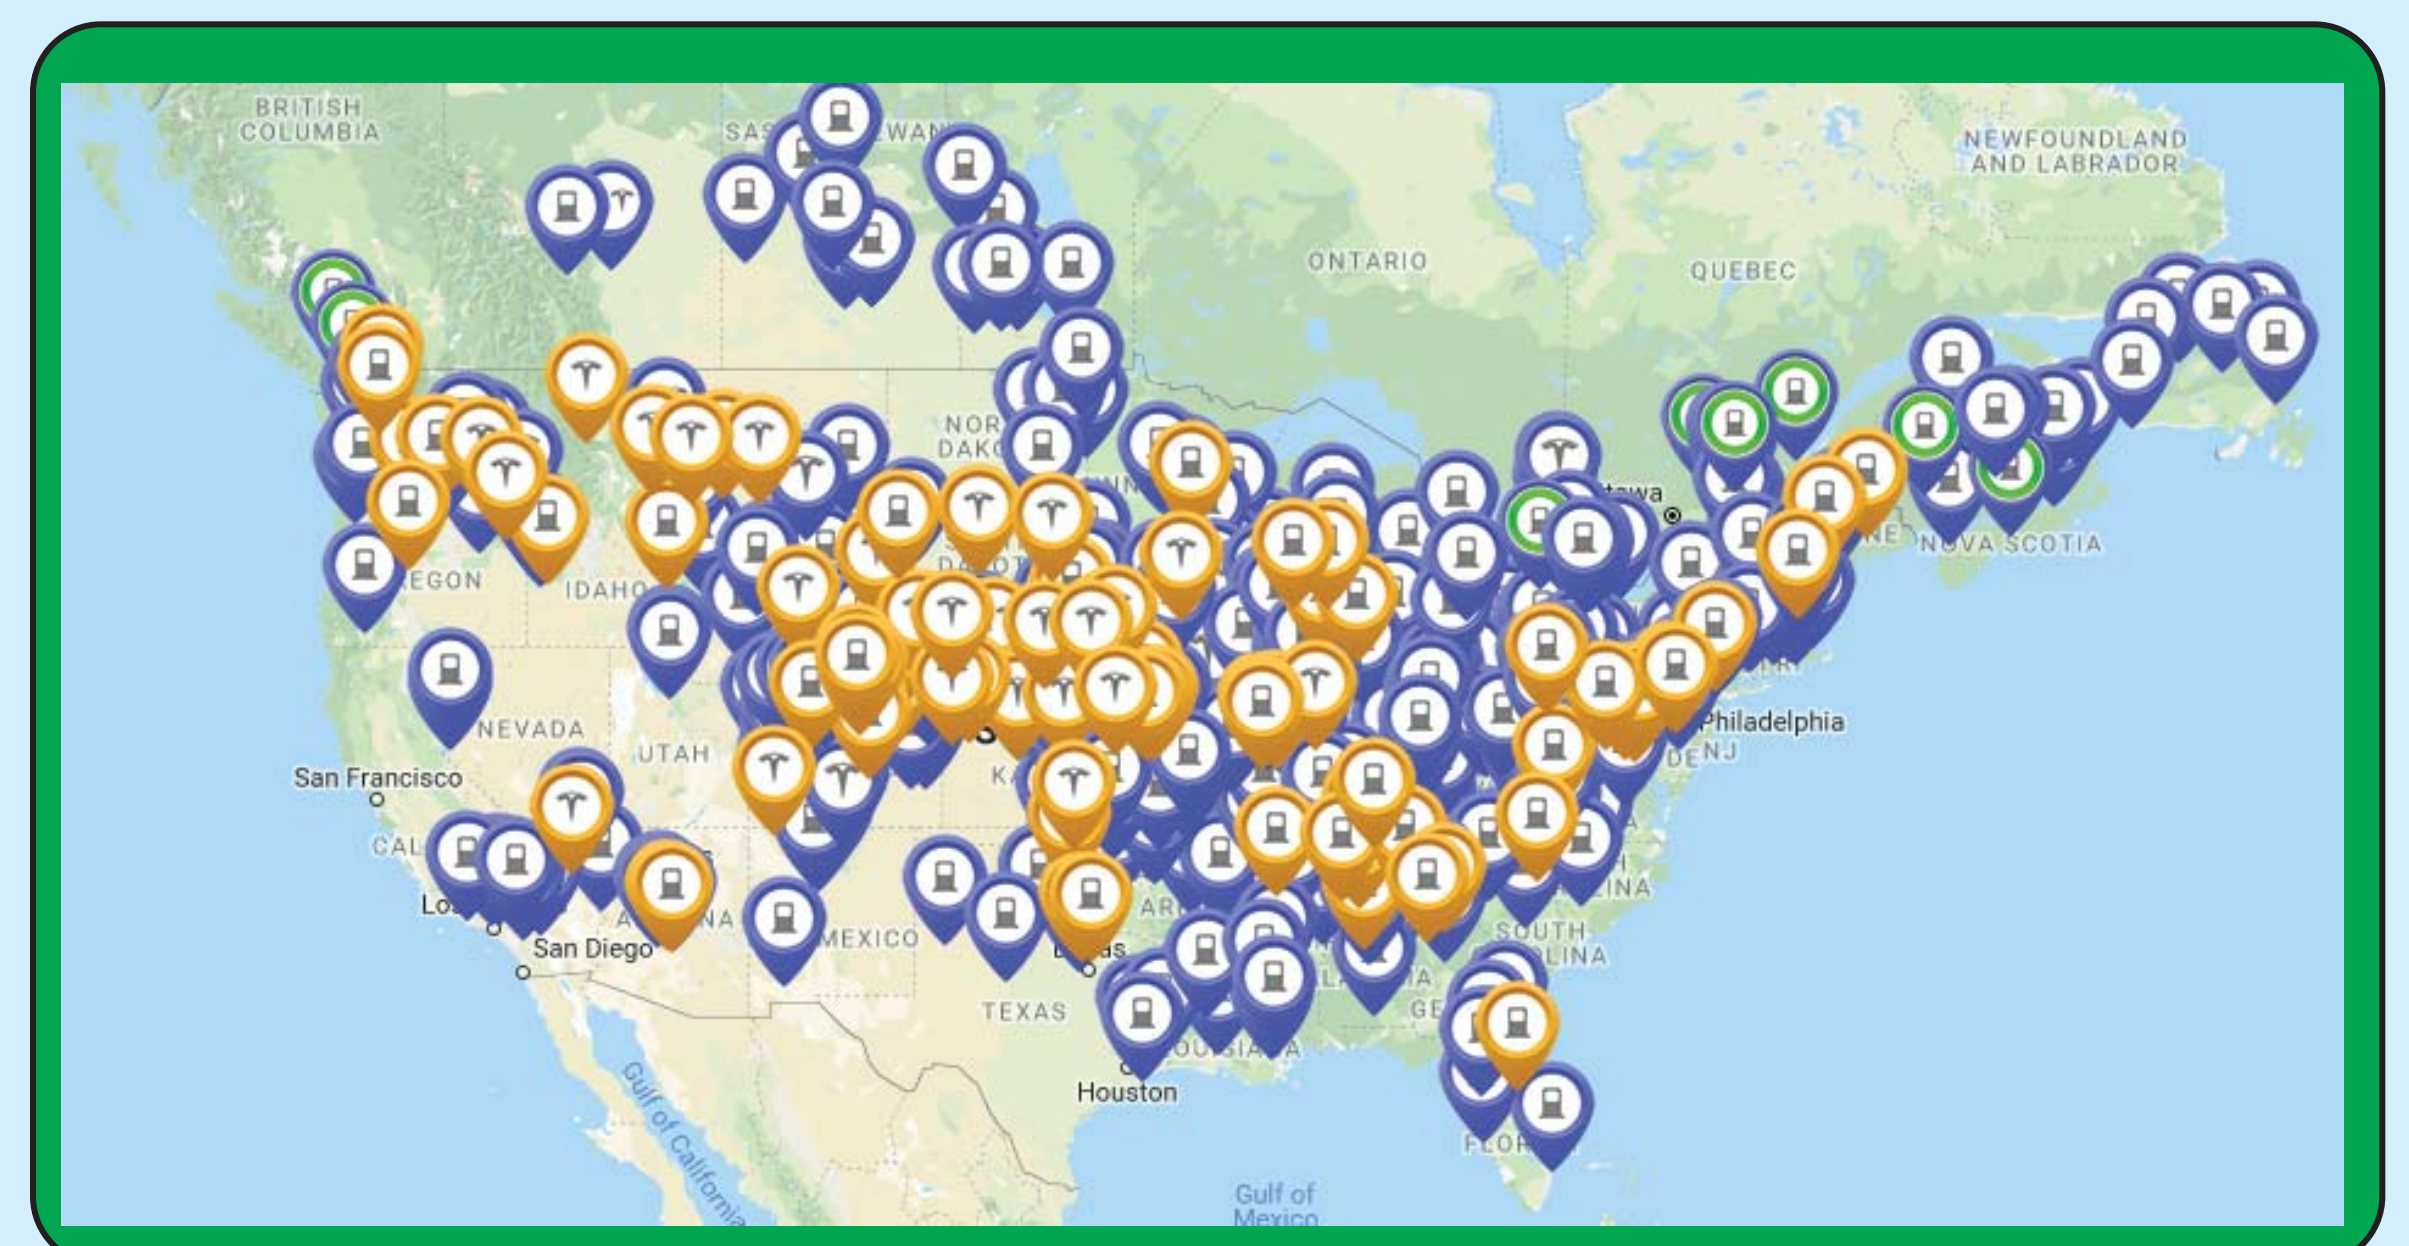

Public EV Charging Stations

EV Charging Next Exit

Though the number of public charging stations is growing rapidly the majority of charging is performed at home.
