

**Addressing Public Health and Climate Change:
The Colorado Climate Plan**

Mr. Mike Silverstein, Executive Director
Regional Air Quality Council

Monday, September 17th, 1:30 - 3:00pm

Iliff School of Theology Library
sponsored by the Ethics and Ecological Economics Forum

Climate change is affecting public health in many ways. For example, climate change influences air quality levels and the frequency and intensity of food-borne illnesses, vector-borne diseases, and heat-related illnesses. Beginning with the state Climate Plan, the September and October EEE Forums will examine some initiatives in Colorado and beyond to understand such connections and develop effective responses.

Mr. Silverstein is well-positioned to provide an overview of the Public Health section of the Colorado Climate Plan. Mike is a former employee of the Colorado Department of Public Health and Environment—the lead state agency responsible for the Public Health component of the state Climate Plan.

Next EEE Forum: Monday, October 15th, 2018. Topic:
"Addressing Public Health and Climate Change: Colorado's
Climate and Colorado's Health: Examining the Connection."
Presented by the Colorado Health Institute.
